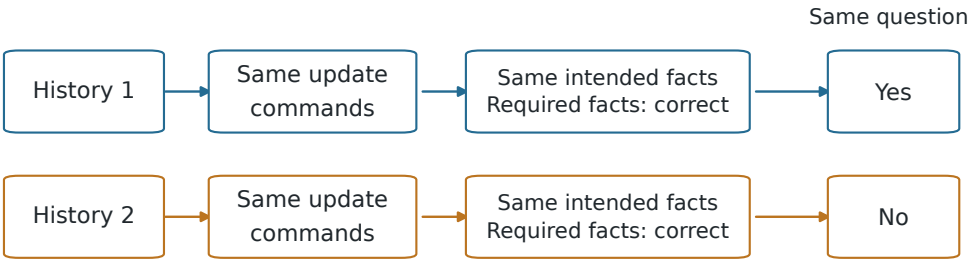
## Correct current facts can leave history-dependent answers

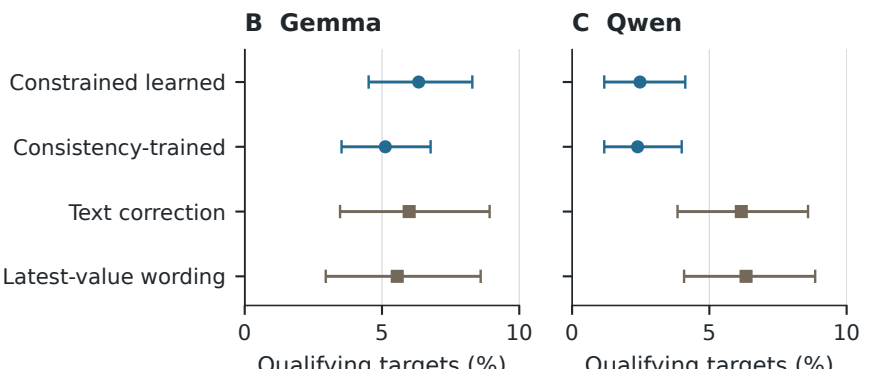
Prospective matched-history test · Gemma and Qwen · all eight conditions

### A Matched-history design



Two illustrated lanes; all 8 histories are tested. Answers shown are conceptual.

Equal correct categories do not imply equal probabilities or hidden states.



64 cases × 18 targets = 1,152 opportunities per seed/textual condition.
All scheduled targets remain in the denominator, including ineligible ones.
99.375% case-bootstrap intervals; learned seeds averaged within each case.
Qualifies: required facts correct in all histories; both references correct;
valid downstream answers differ. Target rate, not case prevalence or error rate.
