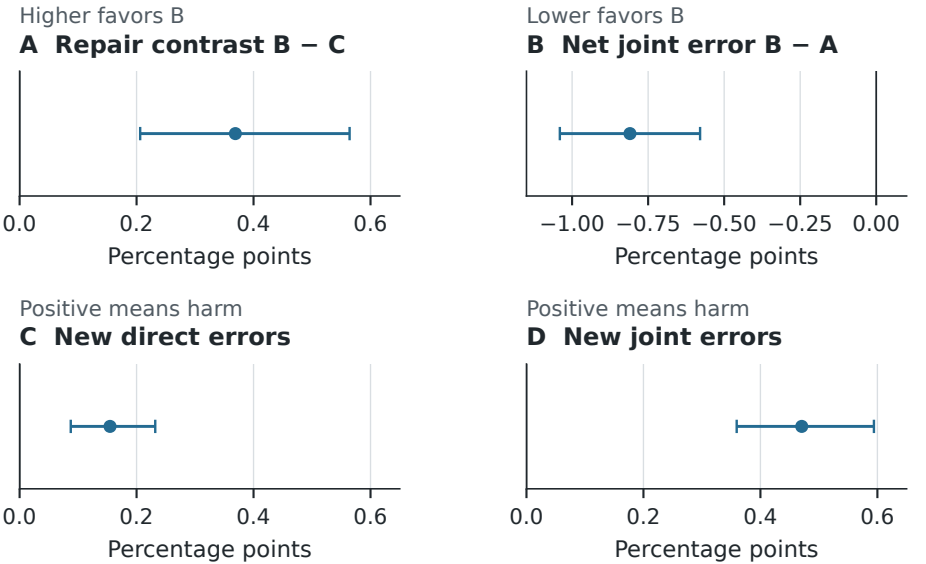
Partial repair comes with newly introduced errors

Prospective Gemma population · all 256 cases · both stored seeds



B: values 16–23 refreshed; C: values 24–31; A: unchanged computation.
98.75% paired-case intervals; 10,000 saved draws; all scheduled denominators.
Baseline W: 83 target/format/seed rows in 63 cases. B repairs 36 rows / 28 cases.
Strong-repair thresholds satisfied: FALSE (36/83 < 50%).
Joint errors: 3,490 → 2,893 / 73,728; full reference: 2,000 / 73,728.
Both partial refreshes require that full reference; no cost advantage established.
