

Correct current facts can still leave downstream answers dependent on source history.

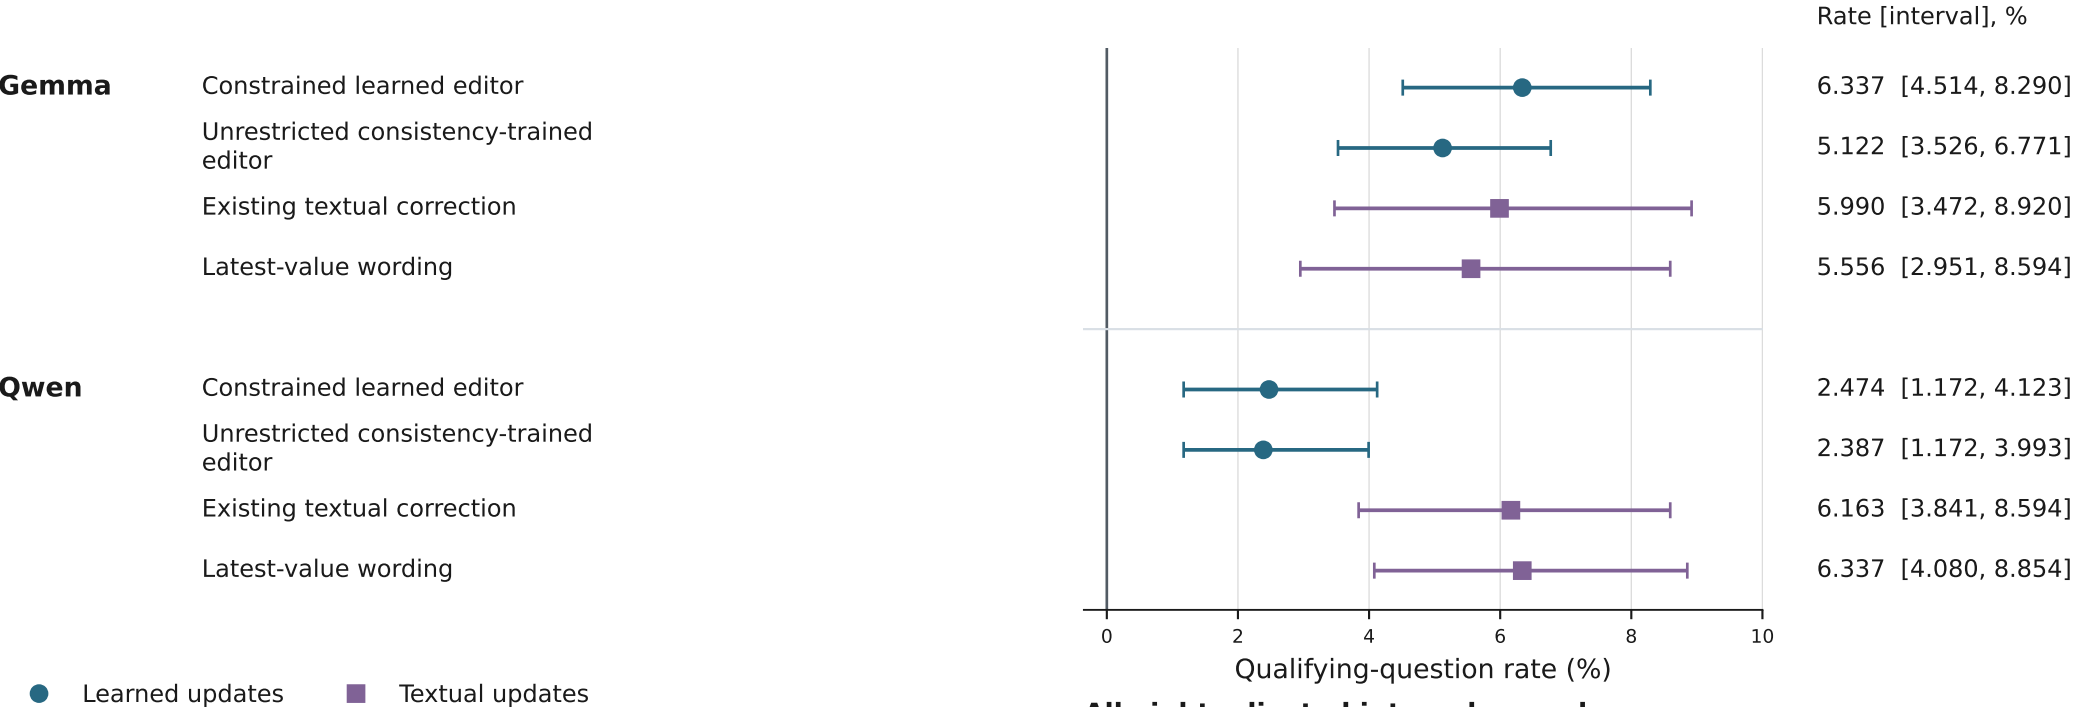

A Matched-history design

Behavioral test: identical intended facts do not imply identical hidden states or erased history.

B Prospective matched-history study

Qualifying-question rates and multiplicity-adjusted 99.375% case-bootstrap intervals

Each row: 64 benchmark cases × 18 questions combining facts = 1,152 per seed or textual condition.
Ineligible questions remain in the denominator; two learned seeds are averaged within each case.

Qualifies: needed facts correct in every history; references correct; different answers to a question combining facts.
References: current facts from the start, and the same update on already-correct facts. Not a case-prevalence or answer-error rate.
