

Changing the later stored activations changes the downstream answer

Gemma: one retrospectively selected history pair, tested with two answer formats.

Current facts: Ada and Gita both oppose Theater. Question: does at least one support it? Correct answer: No.

Direct factual answers remain correct in all 8 strict checks.

Minimum correct-answer probability: 0.999230. Largest change from the corresponding original state: 0.00008612.

Both histories: two changed facts and 517-token prefixes. Split: first 16 layers / remaining 26 layers.

Activations are combined before the question; weights stay fixed. Colors identify the history supplying the later layers.

The formats test the same example, not independent cases or a prevalence estimate.
